## **RMCHCS Radiology Renovations**

**GALLUP, NEW MEXICO-** Rehoboth McKinley Christian Health Care Services (RMCHCS) is proud to announce the new renovations in the Radiology Department. It took two months, but the Radiology Department is finally done. Our main task was to relocate and remodel the offices.

This was not an easy task, since this was for remediation from flood damage and HVAC failure. With the help of the Radiology team, Plant Operations, Employee Health and Infectious Control, EVS team, IT Department, Administration, and many others, including the Belfor Group.

The interior finishes throughout both the additions and remodeled spaces create a refreshed feel while still being comfortable and welcoming to the community visitors. There is a new floor, an extended waiting area, newly repainted walls, new and modern work counters and chairs, a new reception area, with windows that welcome staff and patients upon arrival.

This project not only brings enhanced imaging through the latest Hologic 3D Mammography technology, but it will also provide a more favorable experience for our patients and staff members, in terms of comfort and safety, said CEO Wayne Gillis. “We would like to thank our employees, patients, and community for your understanding and patience during this time. A project like this is an incredible improvement for our community, allowing us to provide greater comfort and services, while decreasing the need for our patients to travel for imaging exams,” he said. “We’re able to continue delivering high-quality care locally through projects like this.”

In offering 3D Mammography™ technology. RMCHCS takes a proactive step towards enhancing the quality of breast cancer screening in our community. Patients interested in scheduling a 3D Mammography™ exam or seeking more information are encouraged to contact the Radiology Department at 505-863-7015.
